## Amendments to the Claims:

The listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims**:

1. (currently amended) A rental estimation method through which rental information with regard to rental devices is provided to a customer through a data exchange between a terminal of the customer and a management server of a rental company, comprising the acts of:

a data input step for entering work content data indicating a work content through the customer terminal; and

a necessary device reporting step for reading out a list of a plurality of necessary devices matching the work content and rental information corresponding to the necessary devices from a predefined database and for providing them to the customer.

2. (currently amended) A rental estimation method according to claim 1, further comprising the act of:

a device selection step for selecting a device to be rented from the list of the necessary devices provided through the necessary device reporting step report.

3. (currently amended) A rental estimation method according to claim 1 or claim 2, further comprising the act of:

a device adding step for adding a device other than the necessary devices for rental.

4. (currently amended) A rental estimation method according to claim 2, further comprising the acts of:

a device adding step for adding a device other than the necessary devices for rental;

a reservation step for making a rental reservation for renting the device selected in through the device selection step and the device added in through the device adding step addition; and

an-accepting step for accepting the reservation thus made in the reservation step.

5. (currently amended) A rental estimation system comprising:

a data input means device through which data are entered by a rental customer;

a work content management database in which a list of necessary devices each corresponding to a work content is stored;

a stock management database in which rental information with regard to the necessary devices is stored;

a rental management server that reads out a plurality of necessary devices matching a work content and rental information with regard to the necessary devices from the work content management database and the stock management database in response to input of data of a work content through the data input means device; and

a reporting means for providing device that provides the information read out by the rental management server to a customer.

6. (currently amended) A rental estimation system according to claim 5, wherein:

the data input means device further allows an entry of data indicating a rental period; and

the rental estimation system further comprises a rental period adjustment means for adjusting device that adjusts a rental period entered and set through the data input means device individually in correspondence to each of the necessary devices.

7. (currently amended) A rental estimation system according to claim 5 or claim 6, further comprising:

a device management database in which specification information relating to specifications of the necessary devices is stored, wherein:

as a predefined detailed information display command is entered through the data input means device, the rental management server reads out

specification information corresponding to the necessary device from the device management database and provides the specification information to a customer.

8. (currently amended) A rental estimation system according to claim 7, wherein:

necessary devices used in a given application are grouped together and groups of necessary devices are stored in the device management database; and

the rental estimation system further comprises a device switching means for device that selectively switching switches the necessary device to a device in a matching group when a predefined input is made through the data input means device.

9. (currently amended) A rental estimation system according to claim 8, further comprising:

an adding means for setting device that sets an additional necessary device selected from the device management database in response to a predefined device add command inputted through the data input means device.

10. (currently amended) A rental information acquisition terminal comprising:

an input means for entering device that enters a work content as prompted in a screen brought up on display;

a recognition means for recognizing device that recognizes the work content entered via the screen brought up on display;

a transmission means for transmitting device that transmits the recognized work content to a server;

a reception means for receiving device that receives information indicating a plurality of types of devices matching the work content and rental information related to the devices, which are searched at the server based upon the work content; and

a display means for displaying device that displays a screen in which the work content are entered and for bringing that brings up a display of the information indicating the plurality of types of devices and their rental information having been received.

11. (original) A rental information acquisition program product for exchanging information related to a rental product between a customer terminal and a server connected through a communication circuit, the program product comprising computer-executable steps of:

generating and displaying a screen in which a work content is entered; recognizing the work content entered in the screen brought up on display; transmitting the recognized work content to the server;

receiving information indicating a plurality of types of devices matching the work content and rental information related to the devices, which are searched based upon the transmitted work content; and

generating and displaying a screen displaying the information indicating the devices and the rental information having been received.

12. (currently amended) A rental information acquisition server comprising:

a database in which information indicating at least a plurality of types of devices and rental information corresponding to the devices are stored in memory in correspondence to a work content;

a recognition means for recognizing device that recognizes a work content transmitted from a terminal;

a search means for search device that searches the database based upon the recognized work content to obtain information indicating a plurality of types of devices and rental information related to the devices in correspondence to the recognized work content; and

a transmission means for transmitting device that transmits the information indicating the devices and the rental information thus obtained to the terminal.
